

Control Systems Engineering

Technology Driven **Solutions**

ABOUT US

With over 30 years' experience of control & process engineering specialising in the Plastics and recycling industry. We work as agents and consultants for a number of industry leading European engineering firms, offering the latest technological advancements at the forefront of the recycling, control, process and measurement industries.

Within our sales and systems engineering teams we have invaluable experience of working both nationally and internationally. We have experience of working in multicultural environments to ensure our customers receive exemplary service and quality no matter where your system solutions may be based.

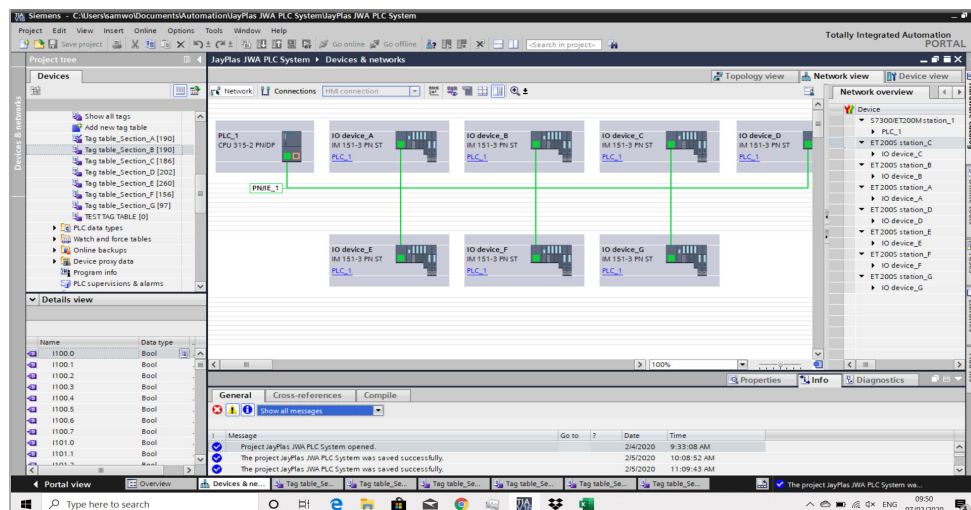

As a family oriented business we understand the importance of developing a trustful working relationship where you as the customer feel you can contact us any time. In order to exceed all expectations regarding your system, the service and support you deserve going forward.

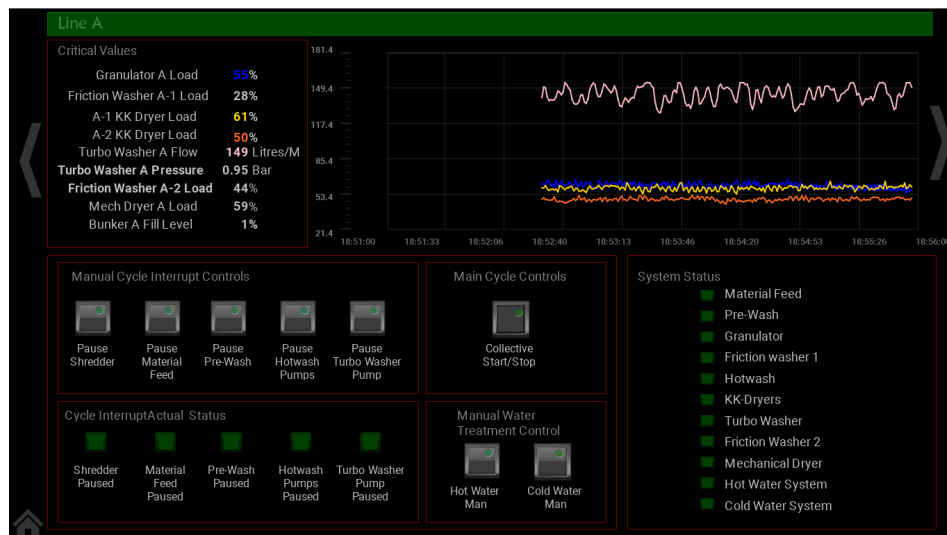

WHAT WE OFFER

CONTROL SYSTEMS ENGINEERING

At John Wood & Associates we offer a tailor-made service to exceed your test, measurement and control system needs. We work closely with our customers to understand your requirements, identify the principal challenges you face and engineer bespoke robust systems integrating both hardware and software to exceed all expectations.

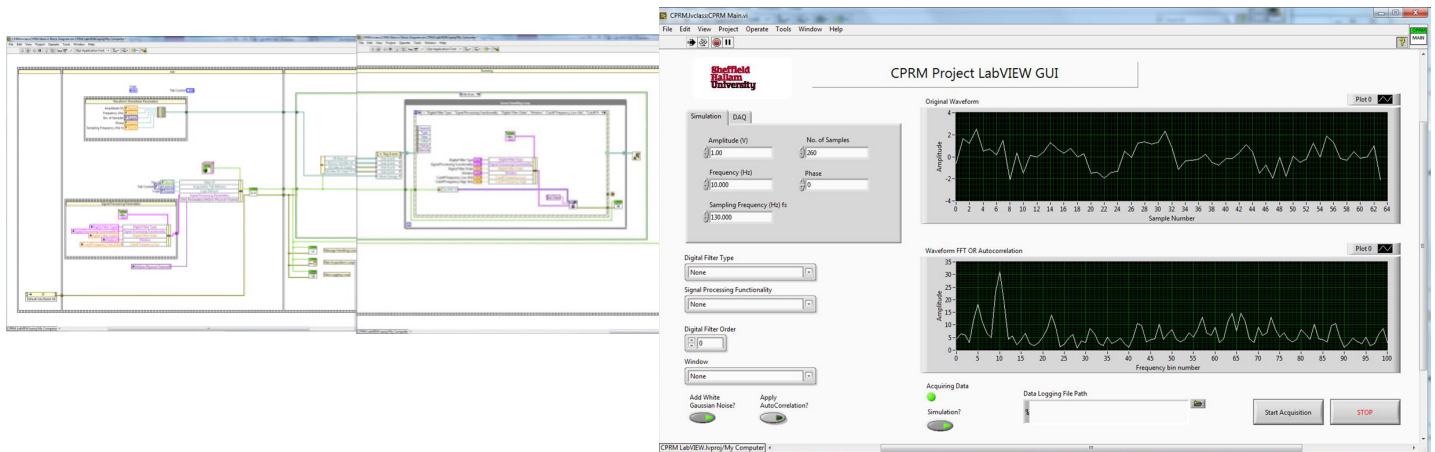

PLC's have become a fundamental part of many control systems worldwide. We have a flexible approach to programming software to meet your specific requirements using not just the most popular PLC models but further well-renowned hardware and software control solutions such as National Instruments.

We have expertise and experience using the following:

- Siemens S5 & S7
- Allen Bradley SLC, CompactLogicx, ControlLogicx, Micrologix
- Mitsubishi A1S, Q & Fx
- Omron
- National Instruments LabVIEW and TestStand

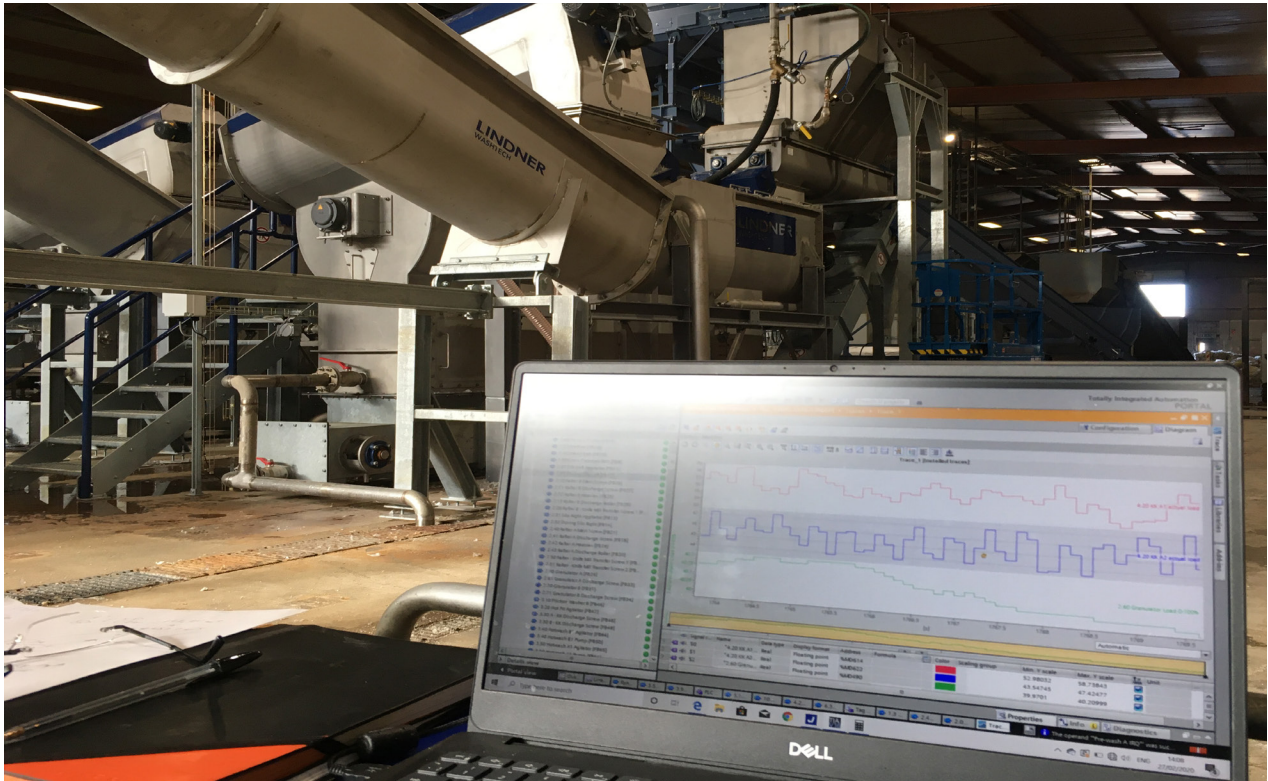

PANEL BUILD & MANUFACTURING

As part of our service we offer the manufacture and build of controls panels and fixings to suit your individual requirements. We can build anything from the most simple control panels to large scale multi-cabinet panels incorporating thousands of electrical connections. Our electrical schematic designers, panel builders and electrical engineers are certified to the highest standards with countless years of experience across a range of engineering disciplines.

All our panels and fixtures are manufactured using the highest grade materials and components to ensure reliability, maximum performance and minimised lifetime costs. We guarantee our customers high quality, affordable control panel solutions with excellent lead times.

SERVICE & SUPPORT

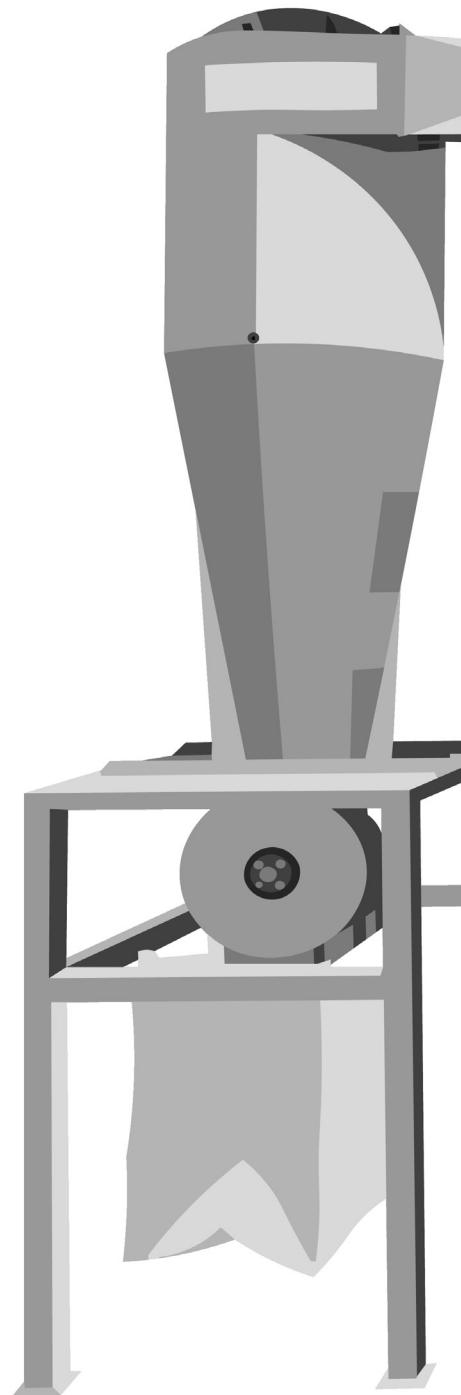

Here at JWA we pride ourselves on offering exemplary service and support to all our customers. We offer a number of service agreements and support packages offering:

- Continued support after commissioning to ensure your system runs at maximum efficiency, performance and uptime.
- Cloud monitoring service to access your system on a multitude of devices / platforms.
- 24Hr technical support from our engineers.
- Obsolescence mitigation.

WHY CHOOSE US

- Quality bespoke control systems solutions with the latest in PLC and other control and process hardware.
- Integrated hardware and software solutions with our trusted panel and fixture manufacturers.
- Reliable, consistent replacement and aftermarket components sales service.
- Exemplary service and support for all our customers tailored to specific requirements.
- Cloud monitoring and online support available to all systems to reduce the downtime of a system and increase customer satisfaction.

CONTACT US

Please feel free to contact us to discuss how we can help with your control system requirements. From integration of a software control system with existing hardware or a full control system solution including hardware acquisition and panel build and installation.
